The present invention relates to a method for producing a plant lipoxygenase with modified positional specificity toward arachidonic acid and to its use for hydroperoxylation of arachidonic acid. In particular, the inventive LOX makes it possible to produce for the first time (11S,14Z,12E,8Z,5Z)-11-hydroperoxy-14,12,8,5-eicosatetraenic acids at a large scale. To this end, arachidonic acid is incubated as substrate with the inventive LOX under appropriate conditions. Hydroperoxylation of the arachidonic acid is then effected, preferably at position 11, with secondary products which are hydroperoxylated at position 8 or position 5 or at position 11 and 8 and 5.
